FUEL FILTER GS2094E

With the following update we present the new **TECNECO GS2094E** fuel filter developed for the new Iveco engines that are used on the Daily EURO6. The filter, with performance on par with the original FIAT 5802050393, guarantees a water separation capacity of more than 95% from diesel fuel thanks to the use of a particular synthetic filtering medium characterized by a gradient of scalar porosity, defined as "volumetric". The effect of filtration in depth, combined with the particular polymer used, favors the aggregation of water molecules in ever-increasing drops that can easily separate from the gas oil. (COALESCENCE phenomenon). The filter, apparently confused with our **TECNECO GS026034E** which is however applied on the Daily, is not interchangeable with the **TECNECO GS2094E** for different heights. In order to avoid filter installation errors compared to the other, **TECNECO** always recommends consulting the online catalog.

GS2099E vs GS2100E: TECHNICAL DIFFERENCES

The new fuel filters with **TECNECO GS2099E** and **GS2100E** code may seem apparently identical but they differ technically for the type of filter media with which they were designed and produced. Both codes are equipped with a high separation water / fuel filtering media composed of 3 different filtration layers according to the Original Mercedes and Mann PU11001zKIT / PU11002zKIT versions:

- HIGH SEPARATION WATER - FUEL MEDIUM FILTER:** HWS Efficiency 99.7% used on **GS2099E** and HWS efficiency 95% used for **GS2100E**;
 - HYDROPHOBIC NET** to retain water particles larger than 5 microns;
 - SUPER-ABSORBENT "NORAFIN CRYSTALEN" FIBER** to absorb water particles smaller than 5 micron through a gelation phase guaranteed only by this innovative filtering material.
- To avoid errors in the installation of one code over the other, **TECNECO** recommends consulting the online catalog.
