OIL FILTER OL2182E

With the following update we introduce the new **TECNECO OL2182E** ecological oil filter, developed for the 1.4 and 1.8 turbo aspirated engines of Chevrolet and Opel. Attention, the filter can apparently be confused with our **TECNECO OL010246E**, also due to the application on the same motors, but in reality this is not the case, in fact it is equipped with a by-pass valve installed directly on the upper bottom and only mounts on the systems. lubrication systems which include a module with filter holder cap manufactured by UFI, while the **TECNECO** code **OL010246E** is mounted on those with filter holder cap manufactured by HENGST.

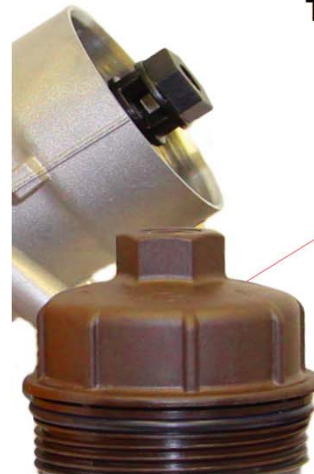

In order to avoid installation errors of one filter over the other, **TECNECO** always recommends consulting the online catalog.

OPEL MOKKA

Mokka is the bold and pure expression of the new Opel stylistic language. But these are not just words. Mokka is action and is equipped with very efficient engines and exceptional handling to live up to what it promises. It is enough to dwell on the beautiful proportions of Mokka to realize that its creators have understood that the power is not enough. You need to know exactly when and how to use it. All of this is true of Mokka's performance: thanks to intelligent functions and advanced technologies, anyone can harness the power with total control.
